PATIENT SAFETY IN YOUR POCKET

Innovative, convenient tool to allow healthcare staff capture Near Miss events and Unsafe Conditions without disrupting workflow.

The KBCore ONC award winning mobile app is designed to improve patient safety as an Hazard Detection and Early Warning system. Through the capture and analysis of Unsafe Conditions and Near Miss events, hospitals can accelerate their journey to high reliability. KBCore embraces interoperability with any data capture and EMR system, creating knowledge from patient safety information gathered at the bedside and delivered to the boardroom in close to real time.
