

Interoperability Service

StratusLink™

StratusLink is the only cloud-based interoperability service that enables any healthcare organization to integrate all their data into 360° longitudinal patient records that are universally interoperable across the organization—and across the continuum of care.

Our patent pending process enables you to immediately begin building clinical and business value through interoperability:

Get Connected—StratusLink provides a scalable foundation for securely controlling and exchanging patient health data among disparate electronic health record systems and business IT applications.

Unlock All Your Data—Clinical, Financial & Operational

Finally, you'll have the data access and control you need to get the right information to the right place at the right time. StratusLink's patent pending process begins with vendor-neutrality (agnostic to any data source or format).

Build a Single Source of Truth

StratusLink enables you to overcome the trust and integrity issues associated with fragmented data by integrating and authenticating all relevant clinical, financial and operational data into electronic, 360° longitudinal patient records—both ensuring quality and reducing errors.

Drive Your Business with Key Performance Indicators

StratusLink KPI-driven analytics tools provide metrics-based decision support with near real-time access to fully integrated data—right at your desktop. Having the right data at the right time in the right form is vital for healthcare organizations to successfully compete in the new value based, pay-for-performance world. With dashboard access to all your data, you can immediately respond to change and make faster, more informed clinical and business decisions across the board.

* **Electronic Master Patient Index (eMPI):** Resolves duplicate patient records and keeps demographic information in sync for patient records that are split across separate registration systems.

CRG / KB Core

CRG Medical's Purple Button™ residents/patient safety mobile app and the KBCore™ innovative early warning hazard detection system capture near-miss events and unsafe conditions, accelerating preventive action and process change.

CRG's technology fosters complete engagement of the workforce, creating knowledge and continual improvement toward a goal of high reliability and zero preventable harm.

The Purple Button Mobile App is compatible with the Stratus Interoperable Platform. "

Secure Single Point of Access and Exchange

Your fully integrated patient records are searchable by patient or by vendor. They are securely stored in your own vendor-neutral, internal health information exchange (IHIE). The data becomes easy to visualize and analyze—and it can be securely distributed electronically in custom views or dashboards to providers, payers, patients, caregivers and other authorized participants within your referral network or across the continuum of care.

Use Your Existing Information Technology Systems

StratusLink is offered as a fully supported cloud-based service so there's no capital expense. StratusLink connects the data from all your existing EMRs/EHRs and business applications. There is no equipment to install or maintain so you can maximize the technology investments you've already made. We'll help you assess what you need and we'll provide all costs right up front. All solutions are custom designed, scalable and highly cost-effective.

Leading and Proven Components

StratusLink was built through partnerships with the leading providers of proven business intelligence, analytics and health information technologies. Our patent pending process and technology was designed to enable providers, payers, patients and other authorized recipients to maximize the value of fully integrated clinical, financial and operational data without respect to data source, format or current technology.
